

AQUA PATCH ASPHALT

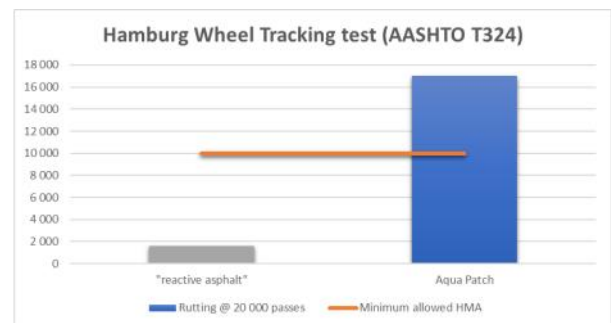

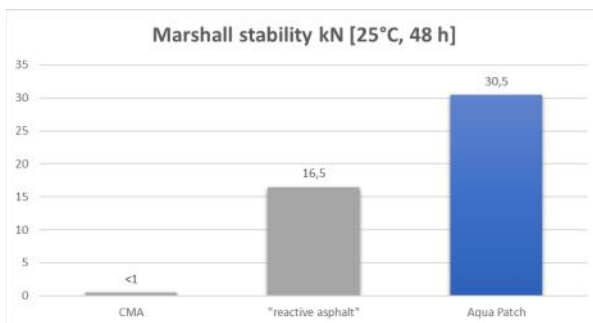

Aqua Patch Asphalt is the most durable and hardest cold mix asphalt on the market. The product is the only cold mix asphalt that truly matches the quality of a hot mix asphalt. The asphalt hardens in contact with water and does not contain any environmentally harmful ingredients or solvents. Traffic can immediately be let onto the repaired area and **Aqua Patch Asphalt** works equally well in both summer and winter season.

Instructions for use: prepare the repair area by removing debris and fill a base course of compacted sand or gravel. Leave a depth of 2-4 cm for the asphalt — for shallow area surfaces we recommend **Potmix® Asphalt Patcher** and in deeper areas the asphalt should be compacted in layers. On smooth, difficult to attach surfaces, we recommend using **Potmix® Asphalt Primer** for extra adhesion. Fill the repair area with the asphalt and apply water (1 l / 20 kg asphalt) to it. Compress thereafter the asphalt with intermittent pressure. If no compacting tools are available, traffic can be brought onto the surface to apply the compacting force.

Aqua Patch Asphalt is offered with an unique
3 YEAR LIMITED GUARANTEE!
